

WolfCafe - Use Case 10

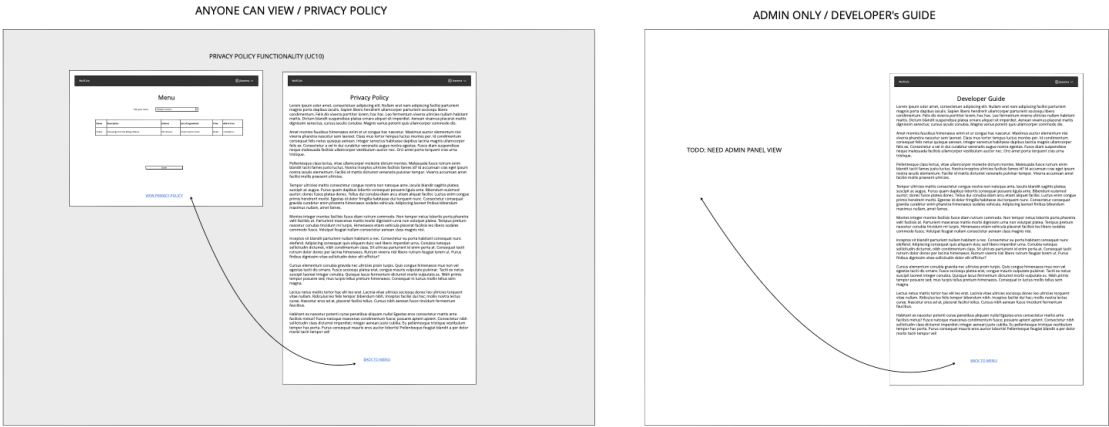

“Access Information - User Guide, Developer Guide, Privacy Policy”

Design Decisions (frontend, backend) - done

Considering that management of the user guide, developer guide and privacy policy may not be done by a member of the development staff (perhaps the legal department, or management may wish to edit), we had to consider many ways to accomplish this. Considering that all three need to be formatted properly, but also easily manageable, we landed on creating all three in a markdown format to be presented to the frontend through a backend controller that reads the file and returns it to the frontend upon request. Consider this process: the user views the page [‘https://wolf-cafe.com/privacy-policy’](https://wolf-cafe.com/privacy-policy) from our React frontend (**‘privacy-policy.jsx’**). The JSX will then query the controller (**‘DisplayFileController’**) through a REST API request, which will then return a local .md (markdown) file from our servers. Upon this, our react components (**‘ViewDeveloperGuide.jsx’**, **‘ViewPrivacyPolicy.jsx’**, **‘ViewUserGuide.jsx’**) will parse the file and return it to the user in an easy-to-read format. Considering that the user guide, developer guide and privacy policy have varying access restrictions, we will use our role restrictions in Spring Boot to control access levels and maintain security to avoid users being able to see sensitive information in our developer’s guide.

Frontend Elements

Original Design (SAME AS UPDATED DESIGN)

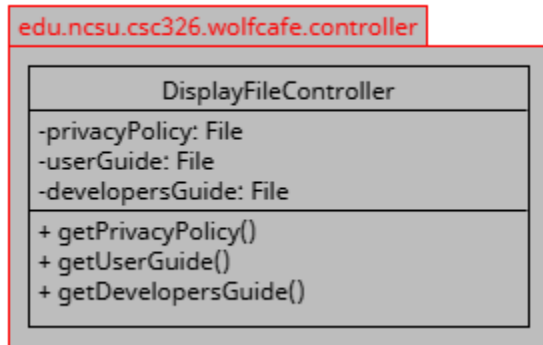

Changelog

- Since it's iteration 1A we did not change anything

Backend Elements
