

UC 4-Edit Recipe Design Decisions

Frontend Decisions

We keep the frontend for Modify Recipe basically the same as the Modify Recipe frontend for Coffee Maker because we felt the Coffee Maker frontend was easy to use, clear, and user-friendly for staff to navigate. We also keep the success and error messages which use color and words to accommodate the visually impaired.

Backend Decisions

The backend flow should again be extremely similar to the Modify Recipe use case in the Onboarding Project. A controller simply goes in, accesses the ItemService class, which then reaches out to our ItemRepository who can actually modify the values stored by the items. This keeps everything familiar to us, which should ease the process of implementation.
