

UC 5-Add Inventory

Design Decisions

Frontend Decisions

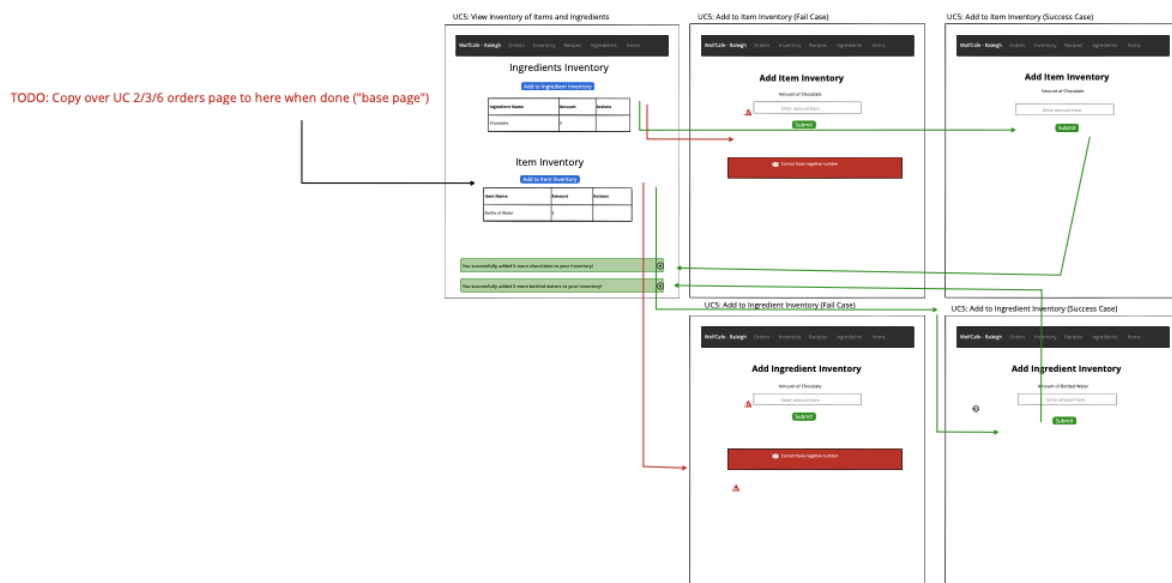

The frontend for this use case is similar to that of Coffee Maker. The only difference is that now our system has both ingredients and an item inventory, so for the frontend, we created two separate tables to make the system more organized. The system still uses color, words, and symbols to accommodate the visually impaired.

Backend Decisions

Adding the inventory here should really be the exact same as it was in CoffeeMaker. Since there is no new functionality, other than checking to see if it is a staff member making this request, there does not need to be any more actual Inventory classes than were provided and ported over from our previous versions.
